## HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

The Patent Term Adjustment to date is 729 day(s). If the issue fee is paid on the date that is three months after the mailing date of this notice and the patent issues on the Tuesday before the date that is 28 weeks (six and a half months) after the mailing date of this notice, the Patent Term Adjustment will be 729 day(s).

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (<http://pair.uspto.gov>).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. ## DETAILED ACTION

### *Allowable Subject Matter*

1. Claims 13, 16-18, 24-31 are allowed.
2. The following is an examiner's statement of reasons for allowance:

(1) Regarding claims 13, 16-18, 24-28:

The present invention describes a method comprising monitoring trends of phase adjusts of signals from a phase rotator control of a clock-data-recovery circuit to a reference clock of a serial receiver, including utilizing an up-down counter and an adder to accumulate phase adjust data from the phase adjusts, wherein the phase adjusts include first rotate up and rotate down signals for phase rotation in the clock-data-recovery circuit; and adapting the phase adjusts to create future adjusts based on previous adjusts including utilizing combinatorial logic to generate the future adjusts based on the accumulated phase adjust data and the previous adjusts, wherein the future adjusts include second rotate up and rotate down signals improving a rate of compensation for the frequency offsets by the phase adjusts, and wherein the first rotate up and rotate down signals and the second rotate up and rotate down signals are logically ORed to provide the phase adjusts to the reference clock. The closest prior art, Fuji (US 5,349,309), Makarov (US 7,075,948 B2), and Usui (US 6,269,127 B1) disclose a similar system and method but fail to disclose wherein the first rotate up and rotate down signals and the second rotate up and rotate down signals are logically ORed to provide the phase adjusts to the reference clock. This distinct feature has

been added to independent claims 13 and 24; thus rendering claims 13, 16-18, 24-28 allowable.

(2) Regarding claims 29-31:

The present invention describes a method comprising using an up/down counter for counting rotate up and rotate down signals from a phase rotator control for phase adjustments by a clock-data-recovery loop of a serial receiver; using an adder coupled to the up/down counter that outputs accumulated data indicative of a trend in the phase adjustments; and using combinatorial logic coupled to the adder to adapt the rotate up and rotate down signals based on the accumulated data, wherein the combinatorial logic generates a new rotate up signal based on an overflow in the adder and wherein the combinatorial logic generates a new rotate down signal based on an underflow in the adder. The closest prior art, Fuji (US 5,349,309), Makarov (US 7,075,948 B2), and Usui (US 6,269,127 B1) disclose a similar system and method but fail to disclose using combinatorial logic coupled to the adder to adapt the rotate up and rotate down signals based on the accumulated data, wherein the combinatorial logic generates a new rotate up signal based on an overflow in the adder and wherein the combinatorial logic generates a new rotate down signal based on an underflow in the adder. This distinct feature has been added to independent claims 29; thus rendering claims 29-31 allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
